IBM Bob prompt orchestration + IBM watsonx.ai — automating the weekly GM sales prep workflow

v2.6.3-rc1 · Path 1: Built During Challenge

IBM BOB — PROMPT ORCHESTRATOR + DEVELOPMENT PLATFORM

This project uses **IBM Bob** in two explicit roles that together drive all productivity gains: as the **development platform** (51 sessions, every line of code, all architecture) and as the **runtime prompt orchestration layer** that sequences watsonx.ai model calls — scoring prompts, narrative prompts, delta summary prompts — every time the workflow runs.

ROLE 1 — IBM BOB AS DEVELOPMENT PLATFORM

Bob authored all prompt templates used in production, designed the workflow orchestration sequence across 3 watsonx models, and built every application layer across 51 sessions (~100 hrs). Session log committed to repo as proof.

ROLE 2 — BOB'S PROMPTS & TEMPLATES DRIVE WEEKLY WORKFLOW

The scoring prompt template (granite-13b), narrative prompt template (llama-3-70b), and delta prompt template (granite-3-8b) were all authored and refined by Bob. They run every week, for every user, orchestrating the full GM prep workflow automatically.

PERSONAL & TEAM PRODUCTIVITY — WHAT BOB'S PROMPT ORCHESTRATION AUTOMATES EVERY WEEK

90 min Manual weekly prep — before	<5 min Bob-orchestrated prep — after	94% Time reduction every week	~675 hrs Saved/year across 9 IBM users
--	---	---	--

IBM BOB'S PROMPT TEMPLATES & WORKFLOW ORCHESTRATION — STEP BY STEP

Load Pipeline IBM Bob Bob built the HAR parser that imports ISC data past IBM w3id auth. No prompt needed — pure orchestration.	Score Deals Bob prompt → granite-13b Bob's scoring prompt template sends each opportunity's fields to ibm/granite-13b-instruct-v2 via IBM watsonx.ai. Returns 0–100 score + tier.	GM Narrative Bob prompt → llama-3-70b Bob's narrative prompt template sends filtered pipeline context to meta-llama/llama-3-70b-instruct. Returns meeting-ready prose + bullets.	What Changed Bob prompt → granite-3-8b Bob's delta prompt template sends week-over-week diff to ibm/granite-3-8b-instruct. Returns change narrative for PPT slide.	Custom Report IBM Bob + pptxgenjs Bob's Column Picker template generates a user-defined IBM-branded PPTX with chosen columns, drag-reordered, in seconds.
--	--	---	---	--

Bob's prompt orchestration replaces human toil: Before this app, a Sales VP spent 20–30 minutes writing a GM narrative from memory, 30 minutes hand-scoring deals, 20 minutes comparing last week's pipeline. Bob's prompt templates do all three automatically, sequenced, every week — so the VP spends those 75 minutes in front of customers instead.

IBM watsonx Products Used · Bob Prompt Templates · Technical Architecture

ISC Automated Sales Forecast

v2.6.3-rc1

IBM WATSONX PRODUCTS & SERVICES — NAMED EXPLICITLY

IBM watsonx Product / Service	Where used in this solution	Specific model or feature
IBM watsonx.ai	Foundation model inferencing via REST API — all three AI workflow steps	Inference endpoint: us-south.ml.cloud.ibm.com
IBM watsonx.ai — Scoring	Opportunity confidence scoring: stage, close date, Next Steps, FLM alignment, forecast match → 0–100 score	ibm/granite-13b-instruct-v2
IBM watsonx.ai — Narrative	GM meeting narrative generation: scoped to current filtered pipeline view → executive paragraph + bullets	meta-llama/llama-3-70b-instruct
IBM watsonx.ai — Delta Summary	Week-over-week change narration: diff object (new/dropped/promoted/slipped) → prose summary for What Changed slide	ibm/granite-3-8b-instruct
IBM Bob	Primary development platform (51 sessions, all code + architecture) AND prompt template author for all three watsonx.ai integrations AND runtime workflow orchestrator sequencing all model calls	IBM Bob (w3.ibm.com) — session log in repo

BOB'S PROMPT TEMPLATES — WHAT THEY DO

Template name	Input (what Bob sends)	Output (what Bob gets back)	Replaces
Scoring prompt server/watsonxScore.js	Opportunity fields: stage, close date, forecast category, next steps text, FLM judgement, amount	Confidence score 0–100, tier (High/Medium/Low), one-sentence rationale	30 min of manual deal-by-deal eyeball scoring
Narrative prompt server/watsonxScore.js	Current filtered pipeline: top deals, totals by stage/forecast, score distribution, owner list	GM meeting opening paragraph (3–4 sentences) + 3 key bullets	20 min of writing from memory before every GM call
Delta summary prompt server/watsonxScore.js	Structured diff: counts + examples of new/dropped/promoted/demoted/slipped/pulled-in deals vs prior baseline	2–3 sentence narrative summary of what moved and why it matters	20 min of manual week-over-week comparison

FULL TECHNICAL ARCHITECTURE

Layer	Technology	Bob's contribution
Frontend	Vanilla JS · IBM Carbon Design System · IBM Plex Sans	All UI: action bar, sort modal, Column Picker drag-to-reorder, Deal Health Card, Rep Hygiene dashboard — Bob-built
Server	Node.js 18 · Express · express-session	All endpoints, auth middleware, prompt orchestration sequence — Bob-built
Database	SQLite · better-sqlite3	Schema, audit ledger, multi-tenant isolation — Bob-designed
Diff engine	Custom (server/diffEngine.js)	computeDiff(), saveSnapshot(), confirmed_at guard — Bob-built, 34/34 tests passing
PPTX generation	pptxgenjs	3 generators: GM Report, PTMP one-pager, Column Picker Custom PPT — all Bob-built
Data ingestion	Custom HAR parser (scraper/load-from-har.js)	Bob identified HAR as only viable path past IBM w3id passkey auth. Built full parser.

ISC Automated Sales Forecast

v2.6.3-rc1

WHY AI ASSISTS — BUT HUMANS REMAIN IN THE LOOP

The honest design thesis: A Sales VP like Dushyant Patel carries 20 years of customer knowledge that exists nowhere in ISC — not in any opportunity field, not in any Next Steps note, not in any forecast category. Which deal is real vs. pipeline theater is a judgment call that lives in a human's head. This application never tries to replace that judgment. IBM Bob's prompts surface the data signals; the VP applies the instinct. The AI handles the 90 minutes of mechanical prep so the human can spend 90 minutes on the relationships and decisions that only a human can make.

TEAM

Jeffrey L. Trbovich — Technical Lead, IBM ATL
Directed all 51 IBM Bob sessions. Product vision, architecture decisions, domain expertise on IBM Sales VP workflows.

Dushyant K. Patel — Business Lead, Sales VP US Public Sector IBM
Business owner and primary user. Validated 90 min → 5 min productivity gain from direct weekly use. Provided 969 live ISC pipeline opportunities for development and testing.

Challenge Team: John Albertson · Kim Salatino · Justin Griffin · Kerry Hovan · Spencer Korn · Jeff Underwood · Muhammad Safwat

IBM Bob — Co-developer + Prompt Author + Runtime Orchestrator

Bob co-wrote every line of production code across 51 sessions. Bob authored all three watsonx.ai prompt templates in production. Bob's workflow orchestration sequences all model calls every time the app runs.

Proof in repository: UCC1-TechnicalSessionLog.md — 51 sessions of unedited IBM Bob co-development history. server/watsonxScore.js — all three Bob-authored prompt templates in production code.

12-DAY DEVELOPMENT TIMELINE — BOB EVERY SESSION

Jul 10

Bob + Jeff: HAR ingestion breakthrough after 7 failed approaches. SQLite schema. First watsonx.ai scoring call. First PPTX. Sessions 1–3.

Jul 11–13

Bob built IBM Carbon UI, diff engine, permanent audit ledger, 34/34 test harness. v2.2.0–v2.3.0.

Jul 14–15

Bob built simulated IBM SSO, multi-tenant isolation, 9 users, login page. v2.4.0.

Jul 16–18

Bob built Pipeline Intelligence Engine: hygiene scoring, Deal Health Card, padded-close detection, manager-grouped Rep Hygiene dashboard. v2.5.0–v2.5.21.

Jul 18–19

Bob built PTMP slide generator, multi-column sort modal, narrative hotfix. Bob refined all three watsonx.ai prompt templates. v2.6.0–v2.6.2-rc2.

Jul 21

Bob built Column Picker Custom PPT, Day 0 reset, full doc sweep. v2.6.3-rc1 — final RC. 1:31 AM ET.

PATH TO PRODUCTION

CIO "Build with watsonx" Path to Production identified. ServiceNow AI System Demand being submitted with Dushyant Patel as Business Process Owner. Upon TRB approval: IBM Cloud Code Engine, CIO-managed IBM watsonx.ai credentials, real IBM w3id SSO. Bob's prompt orchestration layer continues running — scoring, narrating, diffing — for any IBM Sales VP from any browser. Salesforce Connected App eliminates the HAR step. **Client Zero: IBM using Bob and watsonx to fix IBM's own workflow first.**
