

IBM BOB — ROLE 1: DEVELOPMENT TOOL

IBM Bob co-developed **every line of production code** across 51 sessions (~100 hours, July 10–21 2026). Architecture, UI, watsonx integration, diff engine, PPTX generators, test harness, documentation — all built with Bob. The complete session log is in the repository.

IBM BOB — ROLE 2: RUNTIME AI ORCHESTRATOR (INSIDE THE APP)

IBM Bob's pattern — **analyze context → generate actionable insight → deliver at the moment of need** — is the exact model running inside this app every week. Bob orchestrates deal scoring, GM narrative creation, week-over-week change analysis, rep coaching signals, and custom report generation. **Bob doesn't just build the tool. Bob IS the tool.**

PERSONAL & TEAM PRODUCTIVITY — WHAT BOB AUTOMATES EVERY WEEK

90 min	<5 min	94%	~675 hrs
Manual prep — before Bob	Bob-automated prep — after	Time reduction, every week	Saved/year across 9 users

IBM BOB ORCHESTRATES EVERY STEP OF THE WEEKLY SALES WORKFLOW

Load Pipeline	Score Deals	GM Narrative	What Changed	Custom Report
Bob built the HAR parser that imports ISC data past IBM's auth wall	Bob runs granite-13b to score every deal 0–100 and flag coaching signals	Bob runs llama-3-70b to generate meeting-ready prose scoped to current view	Bob runs granite-3-8b to summarize week-over-week pipeline changes	Bob generates a tailored IBM-branded PPTX with user-chosen columns in seconds

The IBM Bob pattern, applied to sales: IBM Bob analyzes a question, generates actionable insight, and delivers it at the moment of need. ISC Automated Sales Forecast applies that exact pattern to the weekly GM prep workflow — Bob analyzes the pipeline, generates scored deals + GM narrative + coaching flags + week-over-week changes, and delivers a ready-to-present PowerPoint. Bob built the app. Bob runs the app. Bob IS the app.

THE PROBLEM — AND HOW BOB SOLVED IT

US Public Sector Sales VP **Dushyant K. Patel** spent 60–90 minutes every week on manual GM meeting prep: exporting ISC data, scoring deals by hand, writing a narrative from memory, building a PowerPoint. IBM Bob identified the HAR file as the only viable ingestion path after seven programmatic approaches failed — then built every layer of the solution across 51 sessions. The result: the same preparation, fully Bob-automated, in under 5 minutes.

IBM BOB ORCHESTRATES CONTENT CREATION, KNOWLEDGE SHARING, AND DEAL PROGRESSION

Sales Workflow Task	What IBM Bob does inside the app, every week	Measurable gain
Content creation — GM narrative	Bob (llama-3-70b via watsonx.ai) generates a meeting-ready executive paragraph + key bullets scoped to the VP's current filtered pipeline view. Every word produced by Bob from live data.	20 min writing → 10 sec
Content creation — Custom PPT	Bob generates an IBM-branded PowerPoint with exactly the columns the user chose, proportionally sized, auto-paginated. The Column Picker modal (built by Bob) lets users drag-to-reorder 12 pipeline fields.	30 min formatting → 15 sec
Knowledge sharing — deal scoring	Bob (granite-13b via watsonx.ai) scores every deal 0–100 based on stage, close date, Next Steps quality, FLM agreement, and forecast alignment. Shared instantly across all 9 users.	30 min eyeball scoring → 15 sec
Knowledge sharing — rep coaching	Bob's Pipeline Intelligence Engine surfaces rep hygiene signals (blank Next Steps, stale close plans, padded-close flags) in a manager-grouped dashboard. P1/P2/P3 action items generated per deal.	Coaching signals that previously didn't exist
Deal progression — What Changed	Bob (granite-3-8b via watsonx.ai) compares live pipeline against the prior confirmed baseline and generates a narrative delta summary: new deals, stage promotions, slippage, amount changes.	20 min manual comparison → automatic
Deal progression — audit ledger	Every confirmed GM Report writes an immutable UUID-keyed baseline entry — enabling quarter-over-quarter deal trajectory analysis, rep performance patterns, and forecast reliability signals. Built by Bob.	New analytical capability — didn't exist before

TECHNICAL ARCHITECTURE — BOB-BUILT, BOB-POWERED

Layer	Technology	IBM Bob's role
Frontend	Vanilla JS · IBM Carbon Design System	Built by Bob: action bar, filter bar, sort modal, Column Picker drag-to-reorder, Deal Health Card, Rep Hygiene dashboard
Server	Node.js 18 · Express	Built by Bob: all endpoints, auth middleware, orchestration of all 3 watsonx models
Database	SQLite · better-sqlite3	Designed by Bob: schema, migrations, append-only baseline ledger, multi-tenant isolation
AI — Deal Scoring	ibm/granite-13b-instruct-v2	Bob designed prompt + integration. Scores all deals 0–100 every session.
AI — GM Narrative	meta-llama/llama-3-70b-instruct	Bob designed prompt + scoping logic. Generates executive meeting narrative every session.
AI — Delta Summary	ibm/granite-3-8b-instruct	Bob designed prompt. Narrates week-over-week pipeline changes every session.
PPTX Output	pptxgenjs	Built by Bob: GM Report, PTMP one-pager, Column Picker Custom PPT with dynamic widths
HAR Ingestion	Custom parser (Bob-built)	Bob identified HAR as only viable path past IBM w3id auth. Built full parser.

IBM Bob in the session log (Session 1, July 10 2026): "HAR ingestion turns IBM's own security posture into a feature — data is exported from an already-authenticated browser session, requiring no credentials stored in the application." Bob identified the breakthrough. Bob built the solution. Bob runs it every week.

IBM Bob — built it + runs it	ibm/granite-13b · llama-3-70b · granite-3-8b	IBM watsonx.ai	IBM Carbon Design System
Node.js · Express · SQLite · pptxgenjs	34/34 tests · github.com/jefftrbo/UCC1-ISCAutomatedSalesForecast · v2.6.3-rc1		

TEAM — IBM BOB AS EQUAL CO-DEVELOPER

Jeffrey L. Trbovich — Technical Lead, IBM ATL
Product vision, domain expertise, architecture direction, and all 51 sessions with IBM Bob. Validated every feature against real weekly GM prep workflow.

Dushyant K. Patel — Business Lead, Sales VP US Public Sector
Business owner and primary user. Provided 969 live ISC pipeline opportunities for development and testing. Confirmed the 90-min → 5-min productivity gain from direct use.

Challenge Team
John Albertson · Kim Salatino · Justin Griffin · Kerry Hovan · Spencer Korn · Jeff Underwood · Muhammad Safwat

IBM Bob — Co-developer + Runtime AI Orchestrator

Bob co-wrote every line of production code across 51 sessions. Bob also runs inside the app every week: scoring deals with granite-13b, generating GM narratives with llama-3-70b, summarizing pipeline changes with granite-3-8b, building custom PPTX output, and surfacing rep coaching signals through the Pipeline Intelligence Engine.

Proof: *UCC1-TechnicalSessionLog.md* — 51 sessions of unedited IBM Bob co-development history, committed to the repository.

12-DAY DEVELOPMENT TIMELINE — BOB EVERY SESSION

Jul 10	Bob + Jeff: HAR ingestion breakthrough (7 failed approaches), SQLite schema, first watsonx scoring call, first PPTX. Sessions 1–3.
Jul 11–13	Bob built IBM Carbon UI, diff engine, permanent audit ledger, 34/34 test harness. v2.2.0–v2.3.0.
Jul 14–15	Bob built simulated IBM SSO, multi-tenant isolation, 9 test users, login page. v2.4.0.
Jul 16–18	Bob built Pipeline Intelligence Engine: hygiene scoring, Deal Health Card, padded-close detection, manager-grouped Rep Hygiene dashboard, rep drill-down modal. v2.5.0–v2.5.21.
Jul 18–19	Bob built PTMP slide generator (Frank Attaie format), multi-column sort modal with group-by dividers, narrative hotfix. v2.6.0–v2.6.2-rc2.
Jul 21	Bob built Column Picker Custom PPT (drag-to-reorder, 12 columns, dynamic widths), Day 0 reset utility, full doc sweep. v2.6.3-rc1 — final RC.

VERSION SUMMARY — BOB-BUILT THROUGHOUT

Version	Bob-built features
v1.0–v2.1	HAR ingestion · SQLite · rule-based scoring · first PPTX
v2.2–v2.3	IBM Carbon UI · diff engine · permanent audit ledger · 34/34 tests
v2.4	Simulated IBM SSO · multi-tenant isolation · 9 IBM users
v2.5.0–v2.5.21	Pipeline Intelligence Engine · Deal Health Card · Rep Hygiene coaching dashboard
v2.6.0–v2.6.2	PTMP slide generator · multi-column sort · narrative hotfix
v2.6.3-rc1	Column Picker Custom PPT · Day 0 reset · final RC — Bob built + Bob runs it

PATH TO PRODUCTION

The **CIO "Build with watsonx" Path to Production** is the identified channel. A ServiceNow AI System Demand is being submitted with Dushyant Patel as Business Process Owner. Upon TRB approval: IBM Cloud Code Engine, CIO-managed watsonx.ai credentials, real IBM w3id SSO. Bob continues orchestrating the workflow — scoring, narrating, diffing, reporting — for any IBM Sales VP from any browser, no installation required.

Salesforce Connected App with OAuth 2.0 eliminates the HAR step entirely. **Client Zero: IBM using IBM Bob and watsonx to transform IBM's own sales workflow before recommending it to clients.**
